<sup>1</sup> Estimation based on Bloomberg Data

Fund manager's comment

European bonds posted losses in the first quarter of 2024. Bond markets worldwide were negatively affected by changing expectations of future interest rate cuts by the Federal Reserve and the European Central Bank. The publication in the US especially of higher-than-expected inflation caused the Fed to take a more cautious stance on its future moves and led to a realignment of interest rate expectations in both the US and Europe. This shift has led to an increase in bond yields, particularly for longer maturities. The slope of the yield curve, which reflects interest rates at different durations, steepened as short-term rates remained relatively stable while long-term rates rose significantly.

US and German government bonds had a similar course in the 1st quarter of 2023 with losses of -1% for the former and -1.4% for the latter. Italian counterparts significantly outperformed all other European government bond markets, closing the quarter with gains of 0.8% on average.

As expected, the Greek market followed the trend, outperforming nevertheless other European markets with smaller losses. Greek bonds are now included in the Bloomberg European bond indices, and this potentially strengthens the demand for them. The Greek bond index (BCEG1T Index) closed the quarter with losses of -0.64% while the corresponding German index (BCEG1T Index) closed with losses of -1.4%. The yield difference between Greek and German bonds at 10 years rose to 108 basis points from 104 basis points in the previous quarter.

Corporate bonds had another good quarter, outperforming most government markets. High Yield corporate bonds in EUR gained around 1.5% in the quarter, while their investment grade counterparts also gained close to 0.5% of their value on average. Emerging markets also gained in the 1st quarter with USD bond index up 1.5%.
