Fund manager's comment

The Greek stock market closed the first quarter of 2024 with gains of 9.99%, with the General Index closing at 1,422.4 points. The reduction of non-performing loans of Greek banks and expectations for dividend distribution from current year profits, boosted the banking sector, which outperformed during the quarter. The positive picture of listed companies' profitability and positive expectations for the current year, pushed up the valuations of most listed companies. The success of the IPO of the International Airport, the successful placements of Hellenic Energy, and Piraeus Financial Holdings, were indicative of the increased investment interest in Greek stocks.

The Greek economy grew at a rate of 2% for the whole of 2023, lower than expectations, as in the last quarter of the year Greek GDP grew by only 1.2%, mainly due to limited investment. The Consumer Price Index rose to close at 3.2% in March 2024, compared to March 2023, with the food index showing a significantly higher increase than in the previous year (+5.3%).

International stock markets rose in the first quarter of the year, driven to a large extent by strong US economic data, expectations of interest rate cuts by central banks, and developments in the technology and artificial intelligence sectors.

In the US, equity values recorded a significant increase. The S&P 500, with gains of 10.6% in dollar terms, outperformed most developed markets. However, the highest return for the quarter was achieved by the Japanese market, as the TOPIX index closed with gains of 18.1%.

The improvement in economic climate and business activity indicators, as well as the easing of inflationary pressures, gave a positive tone to the stock markets of the eurozone, which moved upwards. The sectors of technology, consumer discretionary, financial services and industrial companies outperformed. On the opposite side, the sector of consumer staples, utilities and real estate companies underperformed.

Emerging markets moved positively but underperformed compared to developed markets. The Chinese stock market, despite its partial recovery in the middle of the quarter, closed negatively as investors remained skeptical about the outlook for the Chinese economy.

Bond markets were negatively affected by the change in expectations regarding future interest rate cuts by the Fed and the ECB. The publication in the US of higher-than-expected inflation led the Fed to adopt a more cautious stance on its future moves and led to a readjustment of interest rate expectations in both the US and Europe. This shift led to an increase in bond yields, particularly for longer-term maturities.

The Greek market followed the international trend, but with smaller losses than other European markets. The Greek bond index (BCEC1T Index) closed the quarter with losses of around -0.64%, while the corresponding German index (BCEG1T Index) closed with losses of around -1.4%. The yield spread between Greek and German 10-year bonds rose to 108 basis points from 104 basis points in the previous quarter.
